

High pressure pumps

The assortment high pressure pump are divided in two different principles: A membrane pump and a piston pump. The choice of either system depends on the purpose of use. For spraying the crop as well as cleaning a piston pump is used. In case of chalking (shading) the roof of the greenhouse, membrane pumps are being used.

Various brands and sizes of these pumps are available. Next to the use of the pump it is important to determine the spraying method and capacity of the pump. A 20% surplus of the capacity is to be added because of the return flow of spraying solution.
